

Which hurts more?

An exploration of traditional and
cyber bullying among post-primary
school students in Ireland.

Mary Callaghan
3rd Year PhD student
13th October 2015

Supervisors:
Dr. Michal Molcho
Dr. Colette Kelly

Rationale

- Traditional bullying
- Bullying associated with negative health outcomes
- Differences in consequences of traditional and cyber among Irish adolescents?
 - Lack of information on cyberbullying in Ireland
 - Data on cyberbullying in Ireland – HBSC 2014

HBSC Study

- World Health Organisation (WHO) cross-national research project
- Improve understanding of young people's health and wellbeing
- 4 year survey cycle
 - 1998 – Ireland joined HBSC – traditional bullying data
 - 2014 – cyberbullying

Aim

- Explore the behaviours and consequences of bullying among post-primary school students in Ireland

Objectives

- Compare the outcomes of bullying
- Measure the prevalence of bullying

ORIGINAL ARTICLE

Exploring traditional and cyberbullying among Irish adolescents

Mary Callaghan · Colette Kelly · Michal Molcho

Internationally...

HBSC survey 2009/2010

Note. HBSC teams provided disaggregated data for Belgium and the United Kingdom; these data appear in the map above.

Methods

“repeated aggressive behaviour, with the intention to cause harm within the context of an asymmetrical power relationship”

Olweus, 1993

- 33 countries and regions
- 2002, 2006, 2010
- 11, 13 and 15 year olds
- 581, 838 children

Results - Traditional bullying

Percentages of young people who report being bullied once or more at school in the past couple of months, 2002 - 2010, by gender

Occasional

Percentages of young people being bullied at least two or three times at school in the past couple of months, 2002 - 2010, by gender

Chronic

Boys

Nationally...

HBSC survey 2009/2010

15-year-old boys who have been bullied at school
at least twice in the past couple of months

Note. HBSC teams provided disaggregated data for Belgium and the United Kingdom; these data appear in the map above.

Methods

- 318 students (59% boys, 41% girls)
- 8 schools
- Questionnaires in class
- ~ 40 minutes
- Ethical approval - REC

Variables

- Traditional and Cyberbullying
 - Bullied in past couple of months
 - Mean messages
 - Unflattering pictures
 - Tricked into sharing online
- General health and life satisfaction
 - Excellent, good, fair, poor
 - Cantril ladder of Life
- Risk behaviours
 - Drinking alcohol, smoking, cannabis use and sexual behaviour

Girls	8.5*	11	5.9*	2	9.4*	9	4.4*	4	17.5	7

Conclusion

- Bullying a common occurrence among post-primary students
 - Traditional bullying more common than cyberbullying
 - Cyber and traditional
- Decreasing trend in bullying internationally in a third of countries
 - Fluctuations
 - Gender differences (larger differences among boys)
- Health: being a victim did not significantly predict poor health
 - Involvement in risk behaviours : Boys
- Life satisfaction:
 - Girls: victim of traditional bullying
 - High risk behaviour
- Important issue for adolescent health and wellbeing

Thoughts...

- Definition of bullying
 - In particular cyberbullying
- School policies
 - Lack of boundaries for cyberbullying? Is it a school issue?
- Pace at which technology is changing
 - How do we ensure that we are capturing what is relevant when it is relevant?

Thank you!
